Eprahem Yhya

PYTHON · METATRADER 5 · WEB DEVELOPER

Gaza, Palestine · Remote eprahemyhya45@gmail.com +970 597 448 626 Telegram: @EprahemDevBot github.com/eprahem-yhya

I build trading automation and bots that run unattended, and the websites around them. My main system reads a private Telegram signal channel, classifies every message and executes it on MetaTrader 5 with strict risk rules, on a VPS with a watchdog. I also write MQL5 Expert Advisors and am a verified seller on MQL5.com. I work remotely with traders, signal-channel owners and small businesses.

WHAT I CAN BUILD FOR YOU

METATRADER 5 & TRADING
Expert Advisors, trade managers and account guards, Telegram-to-MT5 trade copiers, indicators, and backtests of a strategy or a signal channel on real price data.

WEBSITES & WEB APPS
Product and landing pages, bilingual Arabic / English sites with full RTL, Next.js apps with sign-in and roles, self-hosted with HTTPS.

PYTHON AUTOMATION & BOTS
Telegram bots, channel readers and forwarders, browser automation with Playwright, scheduled jobs with a watchdog on a Windows VPS, FastAPI dashboards.

SELECTED WORK

Automated Trading System

PRIVATE SOURCE · See the control panel · See the product page

An end-to-end pipeline that reads trading signals from Telegram, classifies them with an AI model, and executes them on MetaTrader 5. My own concept, built from scratch and developed continuously over four months.

- Reads a private signal channel through the Telegram API and, as a second path, through Telegram Web (Playwright + Chrome DevTools Protocol). Classifies each message into one of fifteen intents and forwards only what is executable.
- Executes on MT5 with partial closes, break-even, a stop that trails one target behind, end-of-day close by server clock, risk caps, and rejection of any order whose stop is on the wrong side of entry. A request to remove a stop is never obeyed.
- Mirrors channels to other channels through a bot, including edits and deletions.
- Tick-level backtest in Python (NumPy) of 261 historical signals over five weeks, used to choose the exit rules.
- Runs on a Windows VPS and heals itself: a scheduled watchdog restarts failed services and alerts on a stale feed; sessions are backed up daily; a position-size rule is applied once per trading day; a weekly report is sent. 50+ unit tests cover the trading engine.
- FastAPI and React dashboard on a shared SQLite database (WAL), behind bcrypt, a one-time Telegram code and a signed cookie. A read-only preview is public; the source stays private.

Python · Telethon · Playwright · MetaTrader5 API · NumPy · Gemini API · FastAPI · React · SQLite

LadderGuard — MT5 Trade Manager & Account Guard

MQL5 EXPERT ADVISOR · See the product page

On MQL5 Market

One Expert Advisor on one chart that manages every open position, manual or opened by other EAs, and guards the whole account, with an on-chart panel.

- Targets in multiples of the stop distance (R): 40% closed at TP1, 30% at TP2, stop to break-even plus a few points, then a ladder that moves the stop one level behind each further level. Optional close-all at a set server time.
- Account guard: daily loss limit (% or money), maximum drawdown from the peak or static from the start (prop-firm style), and a cap on new trades per day. A breach closes the positions and locks trading.
- 43/43 unit tests; verified in the MT5 Strategy Tester (partials, break-even, ladder, every lock, timed close) and live on a demo account.

MQL5 · MetaTrader 5 · Strategy Tester

NewsGuard — MT5 Economic News Guard

MQL5 EXPERT ADVISOR · See the product page · On MQL5 Market

One Expert Advisor on one chart that watches the MT5 economic calendar and protects your open positions around important events.

- Around high (or high and medium) impact events it warns, moves stops to break-even, or closes positions, in a window you set; for all positions, manual trades only or one EA. Uses the built-in calendar: no web requests, no DLLs.
- Never opens trades on a live account; limits stated openly (it cannot block a new trade, only close it at the next tick). Published on the MQL5 Market, 39 USD.

MQL5 · MetaTrader 5 · Economic Calendar

RiskPanel — MT5 Risk-Based Lot Calculator & Trader

MQL5 EXPERT ADVISOR · See the product page

On MQL5 Market

A trading panel for MT5 that sizes the lot from your risk and your stop, so the planned loss never exceeds what you chose.

- Risk as % of balance, equity or free margin, or a fixed amount; stop in points or a draggable chart line; lot always rounded down and priced by the terminal's own profit calculation, with a hard risk cap and a margin check.
- Buttons turn grey with a one-line reason when a side cannot be traded; the panel self-tests its maths on start. Published on the MQL5 Market, 30 USD.

MQL5 · MetaTrader 5 · Strategy Tester

GoldSessions — MT5 Session Boxes Indicator

MQL5 INDICATOR · See the product page · On MQL5 Market

A read-only MT5 indicator that draws the Asian, London and New York session boxes with each session's high and low.

- One box per session and day with exact highs and lows from M1 bars, adjustable UTC hours, automatic broker-offset detection, 1 to 30 days. Made for XAUUSD, works on any symbol and timeframe.
- Never trades, no DLLs, no web requests. Published on the MQL5 Market, 30 USD.

Signal Channel Audit

SERVICE · See a sample

Before a client copies a Telegram signal channel, I extract every call, replay it on minute prices with the spread, and show what 200$ at 0.01 lot would have made week by week, with a clear verdict.

- Compares several ways to manage the trades, then stress-tests the best one: without its best trade, in two halves, with a wider entry tolerance.
- Sample, a public gold-signal channel: 15 written calls in a month, 10 closed. The best rule made about +21$ in 13 weeks, carried by one trade. Verdict: not worth copying.

Python · NumPy · Telegram · minute price data

XMIND — Private Community Platform

MEMBERS ONLY

A private social network for one closed community of twenty to sixty people, built with one partner. I wrote the feed and most screens, and I run the server, deployments and backups.

- Invite-only accounts and two server-checked role ladders (site and team). Argon2 passwords, HttpOnly sessions, rate-limited sign-in, and photos served through the visibility rule of their post.
- Arabic and English with full RTL, an Android wrapper app, self-hosted behind Caddy with automatic HTTPS and a nightly backup to Telegram.
- Over 150 unit tests plus an end-to-end browser suite, run before every deploy.

TypeScript · Next.js · React · Node.js · SQLite · Argon2 · Caddy

QR Menu & Table Ordering — Android and Windows

PRODUCT, SOLD TO RESTAURANTS · See the screens

A QR menu and table-ordering system that needs no server, hosting or internet: an HTTP server inside the Android app serves guests over the restaurant's own WiFi.

- Guests order from the browser; the captain confirms; ESC/POS thermal printers print per station, with Arabic shaped correctly. Money is kept in whole minor units so the day's report matches the cash drawer.
- Over ninety instrumented tests on a real device in CI. Windows edition: a Python port shipped as a single .exe, with the same database schema.

Kotlin · Android · NanoHTTPD · Python · SQLite · ESC/POS · PyInstaller · GitHub Actions

Two 3D web demos

AMBER, coffee house · MAISON NOOR, storefront

Single-file Three.js pages: a scroll-driven scene drawn with no image assets, and a fragrance storefront with a glTF bottle and a working cart. Both are bilingual EN / AR with RTL, and fall back to a static view without WebGL or with reduced motion.

TECHNICAL SKILLS

LANGUAGES
Python, MQL5, Kotlin, TypeScript, JavaScript, SQL, HTML, CSS

AUTOMATION & TRADING
Telegram Bot API, Telethon, Playwright, MetaTrader 5 API, MQL5 Expert Advisors, MT5 Strategy Tester, tick-level backtesting (NumPy), watchdogs, MQL5.com verified seller

WEB & MOBILE
Next.js, React, Node.js, FastAPI, Three.js, Android (Kotlin), RTL layout, Caddy

PRACTICE
SQLite, Git, CI on GitHub Actions, unit and end-to-end tests, Windows VPS operations

EDUCATION & LANGUAGES

BSc, Computer Information Systems
Third year · expected 2027–2028 · after a completed programming diploma year

E-commerce Training
Gaza, 2023 · followed by selling on eBay

Arabic · English
Native · Intermediate, strong in written and technical English

Available for freelance and contract work, remote. Paid in USDT.
